OJONE SUSAN OSUOLALE

Backend Software Engineer | ASP.NET Core | Cloud-Native APIs | AI Integration

Email: susanojone@gmail.com | Phone: +234 905 863 5430 | Lagos, Nigeria | GitHub: github.com/susanosuolale | LinkedIn: linkedin.com/in/ojone-osuolale

PROFESSIONAL SUMMARY

Backend Software Engineer with experience designing secure RESTful APIs and backend applications using ASP.NET Core, C#, Entity Framework Core, SQL Server, and PostgreSQL. Skilled in Clean Architecture, CQRS, authentication and authorization, Redis caching, message-driven systems, and CI/CD pipelines. Experienced in deploying applications to cloud platforms and integrating external services, including OpenAI and Paystack. Brings a Data Science background to backend development, with an interest in scalable and AI-integrated applications.

TECHNICAL SKILLS

Languages & Backend: C#, SQL, Python, JavaScript, ASP.NET Core, ASP.NET Core MVC, REST APIs, Entity Framework Core, Clean Architecture, MediatR (CQRS), Repository Pattern, Outbox Pattern, Dependency Injection, JWT Authentication, Role-Based Authorization, OData, Swagger/OpenAPI
Databases & Search: SQL Server, PostgreSQL, Redis, Elasticsearch, SQL Query Optimization
Cloud, Messaging & DevOps: Azure App Service, Azure Functions, RabbitMQ, Docker, Git, GitHub, GitHub Actions, CI/CD, Render
Architecture & Testing: Microservices, Multi-Tenant Architecture, Event-Driven Design, Background Jobs, SignalR, Hangfire, xUnit, Integration Testing, Testcontainers, Moq
AI & Data: OpenAI API, FastAPI, ML.NET, TensorFlow, Scikit-Learn, NumPy, Pandas

EXPERIENCE

Backend Development Intern | *CodeAlpha* Oct 2026

- Developed an event registration system using ASP.NET Core MVC, Entity Framework Core, and SQL Server, with authentication and role-based access control.
- Built a URL shortener with short-code generation, server-side URL validation, database storage, and HTTP redirects.

Software Development Trainee | *Bincom Dev Center* Oct 2026 - Nov 2026

- Participating in a two-month software development training programme; developed and deployed a personal CV website using C# and ASP.NET Core MVC, featuring experience, education, projects, contact information, and a Nigerian tax calculator.

Backend Developer (Collaborative Project) | *SchoolMaster Enterprise* Apr 2026 - Present

- Designed and developed a multi-tenant School Management System using ASP.NET Core and Clean Architecture, collaborating with another developer via Git feature branches and pull requests.
- Built secure RESTful APIs using Entity Framework Core, MediatR, JWT authentication, and role-based authorization; designed PostgreSQL and SQL Server databases, wrote SQL and LINQ queries, and implemented Redis caching.
- Containerized the application with Docker, documented endpoints with Swagger/OpenAPI, and used xUnit, Testcontainers, and Moq for automated testing.

Data Scientist / Data Analyst | *InternPedia* Aug 2024 - Sep 2024

- Developed machine learning solutions, including recommendation systems, anomaly detection, and predictive models.
- Performed exploratory data analysis, statistical modelling, and data visualization; automated data collection using Selenium and BeautifulSoup.

PERSONAL PROJECTS

FreelanceFlow | *Personal Project* 2026

- Architected a microservice platform (Identity, Invoice, Notification, shared contracts) using .NET and C#, applying CQRS with MediatR and the Repository Pattern to improve maintainability.
- Implemented the Outbox Pattern to persist invoice operations and outgoing messages reliably, with a background poller publishing events to RabbitMQ.
- Integrated Elasticsearch with PostgreSQL for full-text, typo-tolerant search, and created shared event contracts for consistent message schemas.

OptiData | *Personal Project* Aug 2026

- Built a web application using ASP.NET Core, Clean Architecture, and MediatR (CQRS), with SignalR for real-time notifications.
- Automated background data-purchasing workflows using Hangfire, integrated ML.NET to predict personalized future data usage, and deployed via CI/CD to Render with a managed PostgreSQL database.

TaskPulse API | *Personal Project* Jun 2026

- Built a RESTful API using ASP.NET Core and Clean Architecture, with MVC admin pages, Entity Framework Core, Redis caching, and SQL Server.
- Added OData filtering, sorting, and pagination, Azure Functions for background jobs, GitHub Actions CI/CD, and Swagger/OpenAPI docs.

AI Subscription Platform | *Personal Project* Jun 2026

- Built an AI-powered backend integrating OpenAI APIs with Paystack payment processing, implementing subscription management, webhook verification, and usage tracking with Clean Architecture.

Personal CV Website & Web API | *Personal Project* Oct 2026

- Built a CV website (ASP.NET Core MVC, Nigerian tax calculator) deployed to Azure App Service, and an ASP.NET Core Web API serving profile, experience, projects, and gallery data with Entity Framework Core seed data, image uploads, and Swagger/OpenAPI documentation.
- Live Website: https://susanosuolalecv20261006155106-cufsaxeuc9cbc6ch.westus3-01.azurewebsites.net/
- Live API: https://susanosuolalecvapi20261014172853-egfraya7b8bkdjak.westus3-01.azurewebsites.net/swagger/index.html

EDUCATION

B.Eng. Electronic & Electrical Engineering | Obafemi Awolowo University 2022

CERTIFICATIONS

Backend Development(CodeAlpha), Machine Learning Specialization, Advanced Learning Algorithms, Supervised & Unsupervised Learning, Recommenders & Reinforcement Learning (Coursera) - SQL for Data Analysis (Udacity) - Intro to Python - Intro to Statistics
